Solution for Full Process Analysis of Multiple Veterinary Drug Residues

189 Veterinary Drug Standards

Full-process analysis from sample preparation to report generation, simultaneous determination of 189 veterinary drug residues in animal foods by single injection.

A variety of veterinary drugs are needed in livestock and fish breeding. According to survey data, hundreds of veterinary drugs are commonly used in the market. These veterinary drugs have certain residues in animal foods and long-term consumption can harm consumers' health, therefore the state is increasing its efforts in the supervision of veterinary drug residues in animal foods. The increasing controls and stringent requirements have made veterinary drug residue testing more challenging. In the face of these challenges, do you feel that the multiple methods currently used to classify and detect multiple veterinary drug residues in foods are time-consuming and laborious? Are you still worried that the limited equipment and manpower can't meet the growing number of testing projects and tasks?

Agilent has developed a comprehensive solution for multiple veterinary drug residues in the Triple Quadrupole LC/MS system, covering the whole process from sample preparation, acquisition methods, data analysis, and final report generation for veterinary drug residue analysis. It can analyze 189 veterinary drug residues in animal food in only one injection at the same time, greatly save your cost and time.

Alta offers the 189 veterinary drugs in pure form, single-component and multi-component standard solutions in the method.

Quality Assurance

- ◆ Developed by A ChemTek, USA, manufactured, sold and supported by Alta Scientific Co., Ltd. in China.
- ◆ ISO 9001 Management Accreditation. Implemented ISO 17025, ISO 17034 Quality Management System.
- ◆ HPLC/LCMS, GC/GCMS, NMR, etc. for Quality Control.
- ◆ Certificate of Analysis (CoA) and Safety Data Sheet (MSDS) provided.
